DIARY APP

INSTALLING JAR IN ECLIPSE

After you successfully add the JAR your Java Build Path / Libraries list should contain the mysql-connector-java-xxxx-bin.jar file

Note: the official place to search and download the mysql-jdbc driver is: https://dev.mysql.com/downloads/connector/j/

The teacher did the job to download the file and place it in Optima, to make it easier for you.

If you want to download directly from the link above, select "Platform independent" as the operating system, download the zip file and extract from there the jar file
